Temperature Regulation: Controlling the temperature of the water to optimize therapeutic benefits, such as reducing muscle tension or promoting relaxation.

Resistance Training: Using the water's resistance to strengthen muscles and improve endurance, often by performing exercises against the water's flow.

Deep Water Running: Running or jogging in deep water while wearing a flotation device, providing a low-impact cardiovascular workout.

Shallow Water Aerobics: Aerobic exercises performed in chest-deep water to improve cardiovascular fitness and muscle tone.

Hydrostatic Weights: Hand-held weights designed for use in the water to increase resistance during aquatic exercises.

Hydrotherapy Jets: Jets of water in a pool or hot tub that can be adjusted to provide massage therapy for relaxation and pain relief.

Aquatic Treadmill: A treadmill submerged in water, allowing for low-impact walking or running to improve cardiovascular fitness and gait.

Thermal Plunge Pool: A small pool with alternating hot and cold water temperatures, used for hydrotherapy to improve circulation and reduce muscle soreness.

Hydrotherapy Shower: A shower that can deliver various water pressures and temperatures for therapeutic purposes, such as promoting relaxation or reducing muscle tension.

Aquatic Massage: A massage performed in water, using gentle movements and pressure to promote relaxation and reduce muscle tension.

Hydrotherapy Exercises: Specific movements and activities performed in water to improve flexibility, strength, and overall physical function.
