Capability is the ability of a psychological operations unit to conduct psychological operations campaigns effectively. Capability can include a range of factors, such as personnel, equipment, and training.

Censorship is the process of controlling or restricting the flow of information to the target audience. Censorship can be used to prevent the dissemination of psychological operations messages, or to limit the access of the target audience to certain types of information.

Civil Military Coordination is the process of coordinating psychological operations campaigns with other civil-military operations, such as humanitarian assistance or disaster relief. Civil military coordination is critical to ensuring that psychological operations campaigns are aligned with the overall mission objectives and are consistent with psychological operations doctrine and policy.

Civil Military Operations is a type of military operation that involves working with civilian populations and organizations to achieve specific goals and objectives. Civil military operations can include a range of activities, such as humanitarian assistance, disaster relief, or psychological operations campaigns.

Classified Information is sensitive or restricted information that is not available to the general public. Classified information can include psychological operations plans, campaigns, or other types of sensitive information.

Clearance is the process of obtaining approval or authorization to conduct psychological operations campaigns or to access classified information. Clearance can include a range of factors, such as security clearance, operational clearance, or other types of authorization.

Cognitive Warfare is a type of psychological operations that involves using information and other types of cognitive attacks to influence the thoughts and perceptions of the target audience. Cognitive warfare can include a range of activities, such as psychological operations campaigns, electronic warfare, or cyber warfare.

Command Authority is the individual or organization responsible for commanding and controlling psychological operations units. The command authority is responsible for ensuring that psychological operations campaigns are aligned with the overall mission objectives and are consistent with psychological operations doctrine and policy.

Communication is the process of conveying psychological operations messages to the target audience. Communication can include a range of channels and mediums, such as radio, television, print, or digital media.

Communication Strategy is a plan for conveying psychological operations messages to the target audience. The communication strategy can include a range of factors, such as the target audience, message, and channel.

Conduct is the process of executing psychological operations campaigns. Conduct can include a range of activities, such as planning, preparation, and execution of psychological operations messages.

Content Analysis is the process of evaluating and analyzing the psychological operations message content. Content analysis can include a range of factors, such as the message, channel, and target audience.

Control is the process of regulating or directing psychological operations campaigns. Control can include a range of factors, such as command authority, clearance, or other types of authorization.

Coordination is the process of working with other units or organizations to conduct psychological operations campaigns. Coordination can include a range of activities, such as planning, preparation, and execution of psychological operations messages.

Counter Propaganda is a type of psychological operations that involves using psychological operations messages to counter or neutralize enemy propaganda. Counter propaganda can include a range of activities, such as developing and disseminating counter messages, or using other types of psychological operations tactics to undermine enemy propaganda.

Counter Terrorism is a type of military operation that involves working to prevent or counter terrorist activities. Counter terrorism can include a range of activities, such as psychological operations campaigns, intelligence operations, or other types of military operations.

Country Team is a group of individuals and organizations that work together to conduct psychological operations campaigns in a specific country or region. The country team can include a range of factors, such as psychological operations units, civil affairs units, or other types of military or civilian organizations.

Cover is the process of concealing or disguising psychological operations activities. Cover can include a range of factors, such as using false or misleading information, or concealing the true nature or purpose of psychological operations campaigns.

Credibility is the ability of psychological operations messages to be believed or trusted by the target audience. Credibility can include a range of factors, such as the source or channel of the message, or the accuracy and reliability of the information.

Cultural Awareness is the understanding of the cultural nuances and values of the target audience. Cultural awareness is critical to developing effective psychological operations messages that resonate with the target audience.

Cyber Warfare is a type of military operation that involves using cyber attacks to disrupt or destroy enemy computer systems or networks. Cyber warfare can include a range of activities, such as psychological operations campaigns, electronic warfare, or other types of cyber attacks.

Deception is the process of using false or misleading information to deceive or manipulate the target audience. Deception can include a range of activities, such as using black propaganda, or creating false or misleading psychological operations messages.

Decision Making is the process of making decisions about psychological operations campaigns. Decision making can include a range of factors, such as evaluating the target audience, developing psychological operations messages, or selecting the most effective channels or mediums.

Demography is the study of the characteristics and demographics of the target audience. Demography can include a range of factors, such as age, gender, income, or education level.

Department of Defense is the US government agency responsible for overseeing and coordinating psychological operations campaigns. The Department of Defense can include a range of factors, such as psychological operations units, civil affairs units, or other types of military or civilian organizations.

Development is the process of creating and refining psychological operations messages. Development can include a range of activities, such as researching the target audience, developing message content, or selecting the most effective channels or mediums.

Disinformation is the process of using false or misleading information to deceive or manipulate the target audience. Disinformation can include a range of activities, such as using black propaganda, or creating false or misleading psychological operations messages.

Doctrine is the official psychological operations policy or guidance that outlines the principles and procedures for conducting psychological operations campaigns. Doctrine can include a range of factors, such as the definition and purpose of psychological operations, or the roles and responsibilities of psychological operations units.

Electronic Warfare is a type of military operation that involves using electronic attacks to disrupt or destroy enemy communication systems or networks. Electronic warfare can include a range of activities, such as psychological operations campaigns, cyber warfare, or other types of electronic attacks.

Emotional Appeal is the process of using emotions to influence the thoughts and behaviors of the target audience. Emotional appeal can include a range of factors, such as using persuasive messaging, or creating emotional connections with the target audience.

Empathy is the ability to understand and share the feelings of the target audience. Empathy is critical to developing effective psychological operations messages that resonate with the target audience.

Evaluation is the process of assessing the effectiveness of psychological operations campaigns. Evaluation can include a range of factors, such as measuring the impact of psychological operations messages, or assessing the achievement of psychological operations objectives.

Execution is the process of conducting psychological operations campaigns. Execution can include a range of activities, such as planning, preparation, and dissemination of psychological operations messages.

Feedback is the process of receiving and using feedback from the target audience to refine and improve psychological operations messages. Feedback can include a range of factors, such as surveys, focus groups, or other types of feedback mechanisms.

Force Protection is the process of protecting psychological operations units and personnel from enemy attack or other types of threats. Force protection can include a range of activities, such as using security measures, or conducting risk assessments.

Foreign Internal Defense is a type of military operation that involves working with foreign governments or organizations to prevent or counter internal threats. Foreign internal defense can include a range of activities, such as psychological operations campaigns, intelligence operations, or other types of military operations.

Forms of Address are the titles or honorifics used to address the target audience. Forms of address can include a range of factors, such as formal or informal titles, or cultural or linguistic nuances.

Forward Presence is the process of maintaining a psychological operations presence in a specific region or country. Forward presence can include a range of activities, such as conducting psychological operations campaigns, or maintaining a psychological operations unit in the region.

Framing is the process of presenting psychological operations messages in a way that is consistent with the target audience's values and beliefs. Framing can include a range of factors, such as using persuasive messaging, or creating emotional connections with the target audience.

Geographic Information System is a type of technology used to analyze and visualize geographic data. Geographic information systems can be used to support psychological operations campaigns, such as by analyzing the terrain or environment of the target audience.

Graphic Design is the process of creating visual psychological operations messages, such as posters, leaflets,

or other types of visual content. Graphic design can include a range of factors, such as using persuasive imagery, or creating emotional connections with the target audience.

Gray Propaganda is a type of psychological operations that involves using psychological operations messages to influence the target audience, without revealing the true source or purpose of the message. Gray propaganda can include a range of activities, such as using anonymous or pseudonymous messaging, or creating false or misleading psychological operations messages.

GSO stands for General Staff Officer, which is a military officer responsible for planning and coordinating psychological operations campaigns. The GSO can include a range of factors, such as developing psychological operations plans, or coordinating with other psychological operations units.

Headquarters is the central location or command center for psychological operations units. Headquarters can include a range of factors, such as command authority, clearance, or other types of authorization.

Human Intelligence is the process of collecting and analyzing information from human sources, such as interviews or surveys. Human intelligence can be used to support psychological operations campaigns, such as by analyzing the thoughts and behaviors of the target audience.

Humanitarian Assistance is a type of military operation that involves providing aid or support to civilian populations in need. Humanitarian assistance can include a range of activities, such as psychological operations campaigns, disaster relief, or other types of humanitarian operations.

Imagery is the process of using visual psychological operations messages, such as photographs or videos, to influence the target audience. Imagery can include a range of factors, such as using persuasive imagery, or creating emotional connections with the target audience.

Influence is the process of using psychological operations messages to shape the thoughts and behaviors of the target audience. Influence can include a range of factors, such as using persuasive messaging, or creating emotional connections with the target audience.

Information Operations is a type of military operation that involves using information to influence the thoughts and behaviors of the target audience. Information operations can include a range of activities, such as psychological operations campaigns, electronic warfare, or cyber warfare.

Information Warfare is a type of military operation that involves using information to disrupt or destroy enemy information systems or networks. Information warfare can include a range of activities, such as psychological operations campaigns, electronic warfare, or cyber warfare.

Infrared Propaganda is a type of psychological operations that involves using infrared technology to disseminate psychological operations messages. Infrared propaganda can include a range of activities, such as using infrared leaflets or other types of infrared psychological operations products.

Instruction is the process of teaching or training psychological operations personnel. Instruction can include a range of factors, such as classroom training, online training, or other types of training programs.

Intelligence is the process of collecting and analyzing information to support psychological operations campaigns. Intelligence can include a range of factors, such as human intelligence, signals intelligence, or other types of intelligence.

Intent is the purpose or goal of the psychological operations campaign. Intent can include a range of factors, such as influencing the thoughts and behaviors of the target audience, or achieving specific psychological operations objectives.

Interagency Coordination is the process of working with other government agencies or organizations to conduct psychological operations campaigns. Interagency coordination can include a range of activities, such as planning, preparation, and execution of psychological operations messages.

International Law is the body of law that governs the conduct of psychological operations campaigns. International law can include a range of factors, such as the laws of war, human rights law, or other types of international law.

Internet is a global network of interconnected computers and servers that can be used to disseminate psychological operations messages. The internet can include a range of factors, such as websites, social media, or other types of online platforms.

Interview is the process of collecting information from individuals or groups through in-person or remote conversations. Interviews can be used to support psychological operations campaigns, such as by analyzing the thoughts and behaviors of the target audience.

IO stands for Information Operations, which is a type of military operation that involves using information to influence the thoughts and behaviors of the target audience. IO can include a range of activities, such as psychological operations campaigns, electronic warfare, or cyber warfare.

JOC stands for Joint Operations Center, which is a command center that coordinates and executes psychological operations campaigns. The JOC can include a range of factors, such as command authority, clearance, or other types of authorization.

Joint Doctrine is the official psychological operations policy or guidance that outlines the principles and procedures for conducting psychological operations campaigns in a joint environment. Joint doctrine can include a range of factors, such as the definition and purpose of psychological operations, or the roles and responsibilities of psychological operations units.

Journalism is the process of collecting and disseminating news and information to the public. Journalism can be used to support psychological operations campaigns, such as by analyzing the thoughts and behaviors of the target audience, or by disseminating psychological operations messages to the public.

Language is the verbal or nonverbal means of communication used to convey psychological operations messages. Language can include a range of factors, such as the choice of words, tone, or cultural nuances.

Leaflet is a type of psychological operations product that involves dropping or disseminating printed materials to a target audience. Leaflets can be used to promote a particular idea or policy, or to provide information to a target audience.

Liaison is the process of working with other units or organizations to conduct psychological operations campaigns. Liaison can include a range of activities, such as planning, preparation, and execution of psychological operations messages.

Linguistics is the study of language and its role in psychological operations campaigns. Linguistics can include a range of factors, such as the choice of words, tone, or cultural nuances.

Logarithmic Scale is a type of scale used to measure the effectiveness of psychological operations campaigns. Logarithmic scale can include a range of factors, such as the impact of psychological operations messages, or the achievement of psychological operations objectives.

Loudspeaker is a type of psychological operations product that involves using loudspeakers to disseminate psychological operations messages to a target audience. Loudspeakers can be used to promote a particular idea or policy, or to provide information to a target audience.

Manipulation is the process of using psychological operations messages to shape the thoughts and behaviors of the target audience. Manipulation can include a range of factors, such as using persuasive messaging, or creating emotional connections with the target audience.

Mass Media is a type of media that reaches a large audience, such as television, radio, or newspapers. Mass media can be used to disseminate psychological operations messages to a wide audience, or to promote a particular idea or policy.

Measurement is the process of evaluating the effectiveness of psychological operations campaigns. Measurement can include a range of factors, such as the impact of psychological operations messages, or the achievement of psychological operations objectives.

Media Analysis is the process of evaluating and analyzing the media environment to support psychological operations campaigns. Media analysis can include a range of factors, such as the types of media used, the audience reached, or the impact of psychological operations messages.

Media Operations is the process of using media to support psychological operations campaigns. Media operations can include a range of activities, such as planning, preparation, and execution of psychological operations messages.

Message is the psychological operations content or theme used to influence the target audience. Message

can include a range of factors, such as the idea or policy being promoted, or the tone and language used.

Methodology is the process or approach used to conduct psychological operations campaigns.

Methodology can include a range of factors, such as the types of psychological operations products used, or the channels or mediums used to disseminate psychological operations messages.

Metrics is the process of measuring the effectiveness of psychological operations campaigns. Metrics can include a range of factors, such as the impact of psychological operations messages, or the achievement of psychological operations objectives.

Military Deception is the process of using psychological operations messages to deceive or manipulate the enemy. Military deception can include a range of activities, such as using false or misleading information, or creating false or misleading psychological operations messages.

Military Information Support Operations is a type of military operation that involves using information to influence the thoughts and behaviors of the target audience. Military information support operations can include a range of activities, such as psychological operations campaigns, electronic warfare, or cyber warfare.

Mission is the overall goal or objective of the psychological operations campaign. Mission can include a range of factors, such as influencing the thoughts and behaviors of the target audience, or achieving specific psychological operations objectives.

Mobility is the ability of psychological operations units to move quickly and easily to conduct psychological operations campaigns. Mobility can include a range of factors, such as the use of vehicles, aircraft, or other types of transportation.

Modeling is the process of creating a representation or simulation of a psychological operations campaign. Modeling can include a range of factors, such as the use of computer models, or the creation of mock psychological operations scenarios.

Motivation is the process of using psychological operations messages to motivate or inspire the target audience. Motivation can include a range of factors, such as using persuasive messaging, or creating emotional connections with the target audience.

Multinational Operations is a type of military operation that involves working with multiple nations or organizations to conduct psychological operations campaigns. Multinational operations can include a range of activities, such as planning, preparation, and execution of psychological operations messages.

Narrative is the story or theme used to convey psychological operations messages. Narrative can include a range of factors, such as the idea or policy being promoted, or the tone and language used.

National Security is the protection of a nation's security and interests. National security can include a range

of factors, such as the use of psychological operations campaigns to influence the thoughts and behaviors of the target audience, or the protection of national security information.

Navigation is the process of finding and disseminating psychological operations messages to the target audience. Navigation can include a range of factors, such as the use of maps, GPS, or other types of navigation tools.

Network is a group of interconnected individuals or organizations that can be used to disseminate psychological operations messages. Networks can include a range of factors, such as social media, email, or other types of online platforms.

Neurolinguistic Programming is a type of psychological operations that involves using language and other types of cognitive attacks to influence the thoughts and behaviors of the target audience. Neurolinguistic programming can include a range of activities, such as using persuasive messaging, or creating emotional connections with the target audience.

Noise is the process of using psychological operations messages to create confusion or disruption among the target audience. Noise can include a range of factors, such as using false or misleading information, or creating false or misleading psychological operations messages.

Nonverbal Communication is the process of conveying psychological operations messages through nonverbal means, such as body language or facial expressions. Nonverbal communication can include a range of factors, such as the use of gestures, tone, or other types of nonverbal cues.

Objectivity is the ability to remain impartial or unbiased in the conduct of psychological operations campaigns. Objectivity can include a range of factors, such as the use of factual information, or the avoidance of emotional or sensational language.

OERT stands for Operational Environment and Readiness Test, which is a type of test used to evaluate the effectiveness of psychological operations campaigns. OERT can include a range of factors, such as the impact of psychological operations messages, or the achievement of psychological operations objectives.

Operational Security is the process of protecting psychological operations units and personnel from enemy attack or other types of threats. Operational security can include a range of activities, such as using security measures, or conducting risk assessments.

Operations Order is a type of order used to direct and control psychological operations campaigns. Operations order can include a range of factors, such as the mission, objectives, or tasks to be accomplished.

OPSEC stands for Operations Security, which is the process of protecting psychological operations units and personnel from enemy attack or other types of threats. OPSEC can include a range of activities, such as using security measures, or conducting risk assessments.

Organization is the structure or arrangement of psychological operations units. Organization can include a range of factors, such as the chain of command, or the roles and responsibilities of psychological operations personnel.

OSINT stands for Open-Source Intelligence, which is the process of collecting and analyzing information from publicly available sources. OSINT can include a range of factors, such as the use of social media, or the analysis of online content.

Outcome is the result or effect of a psychological operations campaign. Outcome can include a range of factors, such as the impact of psychological operations messages, or the achievement of psychological operations objectives.

Outreach is the process of engaging with the target audience to build relationships and promote psychological operations messages. Outreach can include a range of activities, such as public speaking, or community engagement.

PA stands for Public Affairs, which is the process of engaging with the public to promote psychological operations messages or to build relationships with the target audience. PA can include a range of activities, such as public speaking, or media relations.

PAO stands for Public Affairs Officer, which is a military officer responsible for engaging with the public to promote psychological operations messages or to build relationships with the target audience. PAO can include a range of activities, such as public speaking, or media relations.

Paper Products are a type of psychological operations product that involves printing and disseminating paper materials to a target audience. Paper products can include a range of factors, such as leaflets, brochures, or other types of printed materials.

Peacekeeping is a type of military operation that involves working to maintain peace and stability in a region or country. Peacekeeping can include a range of activities, such as psychological operations campaigns, humanitarian assistance, or other types of peacekeeping operations.

Perception is the process of using psychological operations messages to shape the thoughts and behaviors of the target audience. Perception can include a range of factors, such as using persuasive messaging, or creating emotional connections with the target audience.

Personnel is the individuals or groups that conduct psychological operations campaigns. Personnel can include a range of factors, such as the training, experience, or skills of psychological operations personnel.

Phasing is the process of planning and executing psychological operations campaigns in a phased or sequential manner. Phasing can include a range of factors, such as the use of different psychological operations products or channels, or the execution of psychological operations campaigns over time.

Planning is the process of developing and refining psychological operations plans and campaigns. Planning can include a range of factors, such as the mission, objectives, or tasks to be accomplished.

Policy is the official psychological operations guidance or doctrine that outlines the principles and procedures for conducting psychological operations campaigns. Policy can include a range of factors, such as the definition and purpose of psychological operations, or the roles and responsibilities of psychological operations units.

Population is the target audience or group that psychological operations campaigns are intended to influence. Population can include a range of factors, such as the demographics, needs, or concerns of the target audience.

Portrayal is the process of using psychological operations messages to create a particular image or impression of a person, group, or organization. Portrayal can include a range of factors, such as using persuasive messaging, or creating emotional connections with the target audience.

Positioning is the process of using psychological operations messages to create a particular image or impression of a person, group, or organization. Positioning can include a range of factors, such as using persuasive messaging, or creating emotional connections with the target audience.

Posters are a type of psychological operations product that involves printing and disseminating visual materials to a target audience. Posters can include a range of factors, such as the use of images, text, or other types of visual content.

Power is the ability to influence or shape the thoughts and behaviors of the target audience. Power can include a range of factors, such as the use of persuasive messaging, or the creation of emotional connections with the target audience.

Pretesting is the process of evaluating and refining psychological operations messages before they are disseminated to the target audience. Pretesting can include a range of factors, such as the use of surveys, focus groups, or other types of feedback mechanisms.

Print Media is a type of media that involves printing and disseminating materials to a target audience. Print media can include a range of factors, such as newspapers, magazines, or other types of printed materials.

Privacy is the protection of individual or personal information from unauthorized access or disclosure. Privacy can include a range of factors, such as the use of encryption, or the protection of personal data.

Product is the psychological operations message or theme used to influence the target audience. Product can include a range of factors, such as the idea or policy being promoted, or the tone and language used.

Production is the process of creating and refining psychological operations messages. Production can include a range of activities, such as researching the target audience, developing message content, or

selecting the most effective channels or mediums.

Professionalism is the ability to conduct psychological operations campaigns in a professional and ethical manner. Professionalism can include a range of factors, such as the use of accurate and reliable information, or the avoidance of emotional or sensational language.

Propaganda is a type of psychological operations that involves using psychological operations messages to influence the thoughts and behaviors of the target audience. Propaganda can include a range of activities, such as using persuasive messaging, or creating emotional connections with the target audience.

Propaganda Leaflets are a type of psychological operations product that involves printing and disseminating leaflets to a target audience. Propaganda leaflets can include a range of factors, such as the use of images, text, or other types of visual content.

PSYOP stands for Psychological Operations, which is a type of military operation that involves using information to influence the thoughts and behaviors of the target audience. PSYOP can include a range of activities, such as psychological operations campaigns, electronic warfare, or cyber warfare.

Psychological Profile is a type of analysis that involves evaluating the psychological characteristics and behaviors of the target audience. Psychological profile can include a range of factors, such as the demographics, needs, or concerns of the target audience.

Psychological Warfare is a type of military operation that involves using psychological operations messages to influence the thoughts and behaviors of the target audience. Psychological warfare can include a range of activities, such as psychological operations campaigns, electronic warfare, or cyber warfare.
