
Certified Professional in Healthcare Virtual Assistants

Medical Coding and Billing

Medical Coding and Billing

Medical coding and billing are crucial components of the healthcare industry that ensure accurate documentation, proper reimbursement, and compliance with regulatory requirements. Certified Professional in Healthcare Virtual Assistants must have a strong understanding of medical coding and billing to effectively support healthcare providers and facilities.

Medical Coding

Medical coding involves translating medical services, procedures, diagnosis, and equipment into universal alphanumeric codes. These codes are used for billing purposes, insurance claims, data analysis, and research. Medical coders assign specific codes based on documentation provided by healthcare providers. The two main code sets used in medical coding are:

- International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM): Used to report diagnoses and inpatient procedures.
- Current Procedural Terminology (CPT): Used to report procedures and services provided by healthcare professionals.

Medical Billing

Medical billing refers to the process of submitting and following up on claims with health insurance companies to receive payment for healthcare services provided. It involves:

- Verifying patient insurance coverage.
- Creating and submitting claims.
- Resolving claim denials or rejections.
- Posting payments and adjustments.
- Following up on unpaid claims.

Revenue Cycle Management (RCM)

Revenue cycle management is the financial process that healthcare organizations use to track patient care episodes from registration and appointment scheduling to the final payment of a balance. RCM encompasses the entire patient experience, including pre-authorization, charge capture, claims submission, payment posting, denial management, and accounts receivable follow-up.

Health Insurance Portability and Accountability Act (HIPAA)

HIPAA is a federal law that establishes privacy and security standards to protect patients' medical records and other health information. Healthcare providers and their business associates must comply with HIPAA regulations to safeguard patient data and ensure confidentiality.

Electronic Health Record (EHR)

An EHR is a digital version of a patient's paper chart that contains the patient's medical history, diagnoses, medications, treatment plans, immunization dates, allergies, radiology images, and laboratory test results. EHRs allow healthcare providers to access and share patient information securely.

Centers for Medicare and Medicaid Services (CMS)

CMS is a federal agency within the United States Department of Health and Human Services that administers the nation's major healthcare programs, including Medicare, Medicaid, and the Children's Health Insurance Program (CHIP). CMS sets reimbursement rates, quality standards, and regulations for healthcare providers and facilities.

Superbill

A superbill is a form used by healthcare providers to document the services rendered during a patient visit. It includes codes for diagnoses, procedures, and supplies provided to the patient. The superbill is used to generate claims for reimbursement from insurance companies.

Explanation of Benefits (EOB)

An EOB is a statement sent by a health insurance company to policyholders explaining how a claim was processed. It details the services provided, the amount billed, the amount covered by insurance, and any patient responsibility, such as copayments or deductibles. EOBs help patients understand their healthcare expenses.

Clean Claim

A clean claim is a claim that is submitted accurately and completely to an insurance payer with all required documentation. Clean claims contain all necessary information for processing, reducing the likelihood of denial or rejection. Clean claims are processed more quickly and result in faster reimbursement.

National Provider Identifier (NPI)

An NPI is a unique 10-digit identification number assigned to healthcare providers by the Centers for Medicare and Medicaid Services (CMS). The NPI is used for billing purposes and is required on all claims submitted to insurance payers. Each healthcare provider, including individuals and organizations, must have an NPI.

Health Information Management (HIM)

Health Information Management is the practice of acquiring, analyzing, and protecting digital and traditional medical information vital to providing quality patient care. HIM professionals are responsible for managing patient health information, ensuring its accuracy, accessibility, confidentiality, and security in both paper and electronic systems.

Compliance

Compliance refers to the adherence of healthcare organizations and providers to regulations, laws, policies, and guidelines set by governmental agencies, insurance companies, and professional organizations. Compliance ensures ethical practices, patient safety, data security, and quality care delivery.

Audit

An audit is a systematic review and evaluation of healthcare provider documentation, coding, billing, and compliance practices. Audits are conducted internally by healthcare organizations or externally by third-party entities to ensure accuracy, completeness, and adherence to regulatory requirements.

Health Insurance Claim Number (HICN)

The HICN is a unique identification number assigned to Medicare beneficiaries for billing and claims processing purposes. The HICN is being replaced by the Medicare Beneficiary Identifier (MBI) to enhance security and protect patient privacy.

Healthcare Common Procedure Coding System (HCPCS)

HCPCS is a coding system used to describe healthcare procedures, supplies, products, and services not covered by CPT codes. HCPCS Level II codes are alphanumeric and include durable medical equipment, prosthetics, orthotics, supplies, and other services.

Clearinghouse

A clearinghouse is a third-party entity that processes and submits electronic claims to multiple insurance payers on behalf of healthcare providers. Clearinghouses perform claim validation, formatting, transmission, and reconciliation to ensure accurate and timely claim submission.

Remittance Advice (RA)

A remittance advice is a document sent by a health insurance payer to a healthcare provider detailing the payment for services rendered. The RA includes the claim number, payment amount, adjustment codes, denial reasons, and patient responsibility information. RAs assist providers in reconciling payments and managing accounts receivable.

Coordination of Benefits (COB)

COB refers to the process of determining the primary and secondary insurance coverage when a patient is covered by more than one health insurance plan. COB rules establish the order in which insurance payers are responsible for processing and reimbursing claims to avoid duplicate payments.

ICD-10-CM

ICD-10-CM is the International Classification of Diseases, Tenth Revision, Clinical Modification, used by healthcare providers to report diagnoses for patient encounters in all healthcare settings. ICD-10-CM codes provide a standardized language for describing diseases, injuries, symptoms, and conditions.

CPT

CPT is the Current Procedural Terminology, a medical code set published by the American Medical Association (AMA) used to report procedures and services provided by healthcare professionals. CPT codes describe medical, surgical, and diagnostic services and are essential for billing and reimbursement.

Modifiers

Modifiers are two-digit codes appended to CPT and HCPCS codes to provide additional information about the service or procedure performed. Modifiers indicate that a service was altered in some way but does not change the code's definition. Modifiers affect reimbursement and help describe complex scenarios.

Medical Necessity

Medical necessity refers to the justification for services or procedures provided to patients based on their diagnosis, symptoms, and medical condition. Healthcare services must be reasonable, necessary, and appropriate for the patient's condition to be considered medically necessary for billing and reimbursement.

Compliance Plan

A compliance plan outlines the policies, procedures, and protocols that healthcare organizations implement to ensure adherence to regulatory requirements, ethical standards, and best practices. Compliance plans include risk assessments, training programs, auditing processes, and corrective action plans to maintain compliance.

Retrospective Review

A retrospective review is a process of examining medical records, documentation, coding, and billing after services have been provided to ensure accuracy, completeness, and compliance with regulations. Retrospective reviews identify discrepancies, errors, and areas for improvement in healthcare operations.

Denial Management

Denial management is the process of identifying, appealing, and resolving claim denials from health

insurance payers. Healthcare providers and billers must investigate denials, correct errors, provide additional information, and resubmit claims to receive reimbursement for services rendered.

Accounts Receivable (AR)

Accounts receivable is the amount of money owed to a healthcare provider for services rendered but not yet paid by patients or insurance companies. AR management involves tracking outstanding balances, following up on unpaid claims, and resolving billing issues to improve cash flow and revenue.

Claim Scrubbing

Claim scrubbing is the automated process of checking medical claims for errors, inaccuracies, and inconsistencies before submission to insurance payers. Claim scrubbers identify missing information, incorrect codes, and potential billing issues to ensure clean claims and prevent rejections or denials.

Charge Description Master (CDM)

The Charge Description Master is a comprehensive list of all billable services, procedures, supplies, and equipment provided by a healthcare facility. The CDM contains standard charges, descriptions, and codes for each item to facilitate accurate billing, pricing transparency, and revenue capture.

Fee Schedule

A fee schedule is a predetermined list of charges, prices, and reimbursement rates for healthcare services provided by physicians, hospitals, and other healthcare providers. Fee schedules may be set by insurance payers, government programs, or negotiated between providers and payers to establish payment amounts.

Compliance Training

Compliance training is educational programs and resources provided to healthcare staff to ensure understanding of regulatory requirements, coding guidelines, documentation standards, and ethical principles. Compliance training helps prevent fraud, abuse, errors, and noncompliance in healthcare operations.

Claim Adjudication

Claim adjudication is the process of reviewing, evaluating, and deciding on the payment or denial of healthcare claims submitted by providers to insurance payers. Adjudication involves verifying coverage, applying contractual rates, coding accuracy, medical necessity, and compliance with policy terms.

ICD-10-PCS

ICD-10-PCS is the International Classification of Diseases, Tenth Revision, Procedure Coding System used by inpatient healthcare providers to report procedures performed during hospital stays. ICD-10-PCS codes are

alphanumeric and provide detailed descriptions of surgical, diagnostic, and therapeutic interventions.

DRG Coding

Diagnosis-Related Group (DRG) coding is a classification system used by Medicare and other payers to categorize inpatient hospital stays into groups based on similar clinical conditions and resource utilization. DRG coding determines reimbursement rates for hospital services and facilitates data analysis and quality reporting.

Claim Submission

Claim submission is the process of sending electronic or paper claims to health insurance payers for reimbursement of healthcare services provided to patients. Claim submissions include patient demographics, provider information, diagnosis codes, procedure codes, charges, and supporting documentation.

Accounts Payable (AP)

Accounts payable is the amount of money owed by a healthcare provider to suppliers, vendors, creditors, and other entities for goods, services, supplies, and equipment received. AP management involves tracking invoices, making payments, and maintaining financial records to ensure timely and accurate payment.

Charge Capture

Charge capture is the process of accurately recording and documenting healthcare services, procedures, supplies, and equipment provided to patients for billing purposes. Charge capture ensures that all billable items are captured, coded, and submitted to insurance payers for reimbursement.

Appeal Process

The appeal process is a formal procedure used by healthcare providers to challenge claim denials, payment reductions, or coverage decisions made by health insurance payers. Appeals involve submitting additional information, documentation, and arguments to support the reconsideration of denied claims.

Compliance Officer

A compliance officer is a healthcare professional responsible for overseeing and implementing compliance programs, policies, and procedures to ensure adherence to regulatory requirements, ethical standards, and best practices. Compliance officers monitor operations, conduct audits, and investigate potential violations.

Audit Trail

An audit trail is a chronological record of electronic transactions, activities, changes, and access to patient health information within an information system. Audit trails provide a detailed history of data

manipulation, usage, and security incidents to track user activities and ensure data integrity.

HIPAA Privacy Rule

The HIPAA Privacy Rule establishes national standards to protect individuals' medical records and personal health information. The Privacy Rule limits the use and disclosure of protected health information (PHI) and gives patients control over their health data while ensuring its confidentiality and security.

ICD-10-CM Guidelines

ICD-10-CM guidelines provide instructions, conventions, and rules for assigning diagnosis codes to patient encounters based on the nature of the illness, injury, or condition. The guidelines cover code selection, sequencing, documentation requirements, and exceptions to ensure accurate and consistent coding.

Insured Party

The insured party is an individual covered by a health insurance policy who is eligible to receive benefits for healthcare services provided. Insured parties may be the policyholder, a spouse, dependent children, or other designated individuals included in the insurance plan.

End-to-End Testing

End-to-end testing is a comprehensive evaluation of the entire healthcare revenue cycle process from patient registration to claims submission and payment posting. End-to-end testing ensures system integration, data flow accuracy, coding compliance, and revenue accuracy before full implementation.

ICD-10-PCS Guidelines

ICD-10-PCS guidelines provide instructions, definitions, and conventions for assigning procedure codes to inpatient hospital services based on the type of intervention, anatomical site, and approach used. The guidelines cover coding principles, definitions, and coding steps to ensure accurate and consistent reporting.

ICD-10-CM Official Guidelines for Coding and Reporting

The ICD-10-CM Official Guidelines for Coding and Reporting are published annually by the National Center for Health Statistics (NCHS) and the Centers for Medicare and Medicaid Services (CMS). The guidelines provide rules, conventions, and instructions for assigning diagnosis codes in various healthcare settings.

ICD-10-PCS Official Guidelines for Coding and Reporting

The ICD-10-PCS Official Guidelines for Coding and Reporting are published annually by the Centers for Medicare and Medicaid Services (CMS). The guidelines provide rules, conventions, and instructions for assigning procedure codes to inpatient hospital services in the United States.

ICD-10-PCS Root Operation

ICD-10-PCS root operation is the primary action performed during a surgical, diagnostic, or therapeutic procedure documented in the medical record. Root operations describe the objective of the procedure, such as excision, extraction, repair, creation, destruction, or revision, to assign the appropriate procedure code.

ICD-10-PCS Body System

ICD-10-PCS body system is the anatomical region or body part associated with a surgical, diagnostic, or therapeutic procedure documented in the medical record. Body systems provide a classification structure for organizing procedure codes based on the affected body part or system.

ICD-10-PCS Approach

ICD-10-PCS approach is the method or technique used to access, examine, or treat a body part during a surgical procedure documented in the medical record. Approaches include open, percutaneous, percutaneous endoscopic, via natural or artificial opening, and via natural or artificial orifice to assign the appropriate procedure code.

ICD-10-PCS Device

ICD-10-PCS device is the medical instrument, implant, or appliance used during a surgical procedure documented in the medical record. Devices provide additional information about the tools, equipment, or materials utilized in the procedure to assign the appropriate procedure code.

ICD-10-PCS Qualifier

ICD-10-PCS qualifier is the additional detail or specification used to further describe a surgical, diagnostic, or therapeutic procedure documented in the medical record. Qualifiers provide specific information about the procedure, such as location, timing, or method, to assign the appropriate procedure code.

ICD-10-PCS Root Operation Groups

ICD-10-PCS root operation groups classify surgical, diagnostic, or therapeutic procedures based on their primary objective or action documented in the medical record. Root operation groups include body systems, approaches, devices, and qualifiers to facilitate procedure code assignment and reporting.

ICD-10-CM Chapter Specific Guidelines

ICD-10-CM Chapter Specific Guidelines provide additional instructions and rules for assigning diagnosis codes to specific diseases, conditions, or body systems. Chapter-specific guidelines address unique coding scenarios, exceptions, and conventions to ensure accurate and consistent code selection.

ICD-10-CM Section Specific Guidelines

ICD-10-CM Section Specific Guidelines offer guidance and recommendations for assigning diagnosis codes to specific healthcare encounters, symptoms, or factors influencing health status. Section-specific guidelines address coding challenges, sequencing rules, and documentation requirements for accurate code assignment.

ICD-10-CM Conventions

ICD-10-CM conventions are rules and principles used to assign diagnosis codes based on the format, structure, and organization of the code set. Conventions include instructional notes, symbols, abbreviations, punctuation, and sequencing guidance to facilitate accurate and consistent code selection.

ICD-10-CM Alphabetic Index

The ICD-10-CM Alphabetic Index is a reference tool that lists diagnosis terms in alphabetical order with corresponding code numbers. The Alphabetic Index assists coders in locating and selecting the appropriate diagnosis code based on the patient's condition, symptom, or reason for the encounter.

ICD-10-CM Tabular List

The ICD-10-CM Tabular List is the main classification structure that organizes diagnosis codes by disease, injury, condition, or external cause. The Tabular List provides a systematic arrangement of codes with categories, subcategories, and levels of specificity to facilitate accurate code assignment.

ICD-10-CM Official Guidelines for Coding and Reporting Updates

ICD-10-CM Official Guidelines for Coding and Reporting Updates are revisions, additions, or deletions made to the guidelines annually to reflect changes in coding conventions, rules, or best practices. Updates provide clarification, interpretation, and guidance on complex coding scenarios and coding principles.

ICD-10-CM Documentation Requirements

ICD-10-CM documentation requirements specify the necessary information, details, and data elements needed in the medical record to support accurate code assignment. Documentation requirements include diagnoses, conditions, symptoms, treatments, procedures, and other pertinent clinical information for coding purposes.

ICD-10-CM Code Structure

ICD-10-CM code structure consists of alphanumeric characters that represent diagnoses, symptoms, conditions, or factors influencing health status. The code structure includes up to seven characters to identify the category, etiology, anatomical site, severity, extension, and other characteristics of the patient's condition.

ICD-10-CM Code Categories

ICD-10-CM code categories group related diagnoses, conditions, or symptoms together based on similarities in clinical characteristics, etiology, or anatomical location. Code categories provide a systematic classification system to organize and differentiate diseases, injuries, and health problems for coding purposes.

ICD-10-CM Code Blocks
