
Graduate Certificate in Oil and Gas Contract Management

International Oil And Gas Contracts

Abandonment – Related terms: Decommissioning, site restoration, plug-and-abandonment. The process of permanently ceasing production and removing infrastructure. Example: Shutting down an offshore platform after reserve depletion. Practical application involves regulatory approvals and environmental monitoring. Challenges include high costs and long-term liability.

Accord – Related terms: Treaty, convention, multilateral agreement. A formal agreement between states or parties governing oil and gas activities. Example: The Paris Accord influencing carbon-risk clauses. Practical use is to align contractual obligations with international law. Challenges arise from differing national interpretations.

Actionable Claim – Related terms: Dispute, arbitration, notice of claim. A claim that meets contractual conditions for escalation to dispute resolution. Example: A breach of delivery schedule triggering an arbitration clause. Practical application requires timely notice. Challenge: Proving causation and quantifying damages.

Ad Valorem Tax – Related terms: Royalty, fiscal regime, production sharing. Tax levied as a percentage of the value of oil or gas sold. Example: A 5% ad valorem tax on gross sales. Practical use in fiscal modeling. Challenge: Valuation disputes and fluctuating market prices.

Afternoon Session – Related terms: Conference, workshop, stakeholder meeting. A scheduled portion of a contract negotiation event. Example: An afternoon session to discuss force-majeure provisions. Practical application for focused discussion. Challenge: Time-zone coordination for international participants.

Agricultural Lease – Related terms: Land use, surface rights, dual lease. Lease of land primarily for farming but permitting subsurface oil exploration. Example: A farmer granting drilling rights beneath crops. Practical use in mixed-use agreements. Challenge: Reconciling surface damage with agricultural productivity.

Amendment – Related terms: Addendum, variation, supplemental agreement. A written change to the terms of an existing contract. Example: Amending a production schedule due to unexpected reservoir performance. Practical use for flexibility. Challenge: Ensuring mutual consent and proper documentation.

Anti-Corruption Clause – Related terms: Compliance, FCPA, UK Bribery Act. Provision prohibiting bribery and corrupt practices in contract performance. Example: Requiring parties to certify compliance with the U.S. Foreign Corrupt Practices Act. Practical application in due-diligence checks. Challenge: Monitoring compliance across multiple jurisdictions.

Arbitration – Related terms: Dispute resolution, ICC, ad hoc tribunal. A private, binding process for resolving

contract disputes outside courts. Example: Arbitration under the International Chamber of Commerce rules. Practical use for speed and expertise. Challenge: Enforcing awards in countries with weak judicial support.

Asset Transfer – Related terms: Assignment, novation, divestiture. The conveyance of ownership or operating rights of oil and gas assets. Example: Transferring a producing field to a new operator. Practical use in portfolio reshuffling. Challenge: Obtaining regulatory consent and handling existing liabilities.

Attorney-Client Privilege – Related terms: Confidentiality, legal advice, privilege log. Protection that communications between legal counsel and client are not disclosed. Example: Privileged communications regarding contract negotiations. Practical use for candid legal strategy. Challenge: Determining the scope across different legal systems.

Authority – Related terms: Regulator, ministry, permitting agency. Government body empowered to grant licenses and enforce compliance. Example: The Ministry of Energy issuing an exploration licence. Practical application includes liaison for approvals. Challenge: Navigating multiple authorities in joint-venture projects.

Back-In – Related terms: Re-entry, re-activation, workover. Re-commencing production on a well that had been shut in. Example: Back-in a well after a market price recovery. Practical use to capture upside. Challenge: Technical risks of re-pressurization and equipment wear.

Baseline Study – Related terms: Environmental impact assessment, pre-project survey, monitoring. Initial assessment of ecological and social conditions before project commencement. Example: Baseline marine fauna survey for an offshore development. Practical use for impact comparison. Challenge: Data accuracy and baseline variability.

Benchmark Price – Related terms: Reference price, spot price, index. A standard price used to calculate royalties or revenue sharing. Example: Brent crude as benchmark for a royalty formula. Practical application in fiscal modeling. Challenge: Price volatility and index selection.

Beneficial Ownership – Related terms: Shareholder, ultimate control, transparency. The natural person who ultimately owns or controls a legal entity. Example: Identifying the beneficial owner of a shell company in a joint venture. Practical use for anti-money-laundering compliance. Challenge: Hidden structures and nominee arrangements.

Best Efforts Bid Bond – Related terms: Guarantee, performance security, tender. A financial guarantee that a bidder will enter into a contract if awarded. Example: A 5 % bid bond for an offshore drilling contract. Practical use to assure seriousness of bids. Challenge: Assessing bidder's financial capacity.

Bill of Lading – Related terms: Transport document, freight, title document. Document evidencing receipt of cargo for shipment and title transfer. Example: A bill of lading for crude oil loaded onto a VLCC. Practical use in trade finance. Challenge: Discrepancies between cargo and documentation.

Black-Letter Clause – Related terms: Standard clause, boilerplate, non-negotiable. A provision that is widely accepted and rarely altered. Example: A standard force-majeure clause in many oil contracts. Practical use for consistency. Challenge: Hidden risks if not carefully reviewed.

Block Sale – Related terms: Asset purchase, portfolio divestiture, bulk transaction. Sale of a group of oil and gas assets as a single package. Example: A block sale of upstream assets in the North Sea. Practical application for rapid portfolio adjustment. Challenge: Due-diligence across diverse assets.

Bonded Lease – Related terms: Security deposit, performance bond, escrow. Lease that includes a financial security to guarantee performance. Example: A bonded lease requiring the lessee to post a bond equal to 10 % of anticipated royalties. Practical use to protect the lessor. Challenge: Bond valuation and release conditions.

Break-Even Price – Related terms: Unit operating cost, cash-flow analysis, economic limit. The oil price at which revenues equal costs, yielding zero profit. Example: A break-even price of \$45 per barrel for a deepwater project. Practical use in investment decisions. Challenge: Sensitivity to cost overruns and discount rates.

Brokerage Agreement – Related terms: Commission, intermediary, finders fee. Contract whereby a broker facilitates the sale or purchase of oil assets. Example: A brokerage agreement for the sale of a marginal field. Practical use for market access. Challenge: Conflict of interest and fee disputes.

Capacity Clause – Related terms: Production limit, take-or-pay, quota. Provision limiting the amount of oil or gas that can be produced or taken. Example: A capacity clause restricting production to 30 % of field capacity. Practical application in field management. Challenge: Balancing operator flexibility with investor expectations.

Cash-Flow Model – Related terms: Financial model, sensitivity analysis, discount rate. Spreadsheet that projects revenues, costs, and profitability over the life of a project. Example: A cash-flow model for a LNG downstream facility. Practical use for investment appraisal. Challenge: Assumptions on price, production, and operating costs.

Certificate of Title – Related terms: Ownership proof, land registry, legal deed. Document confirming legal ownership of a property or mineral rights. Example: A certificate of title for onshore acreage. Practical use in due-diligence. Challenge: Title defects and overlapping claims.

Change-of-Control – Related terms: Assignment, novation, trigger event. Event where ownership of a party changes, potentially affecting contractual rights. Example: A change-of-control clause that allows the other party to terminate if a new owner takes over. Practical application for risk mitigation. Challenge: Defining thresholds and notice periods.

Clause – Related terms: Provision, article, section. Individual provision within a contract that sets out specific

rights or obligations. Example: The confidentiality clause in an exploration agreement. Practical use for structuring contracts. Challenge: Drafting clarity to avoid ambiguity.

Clear-Title Warranty – Related terms: Indemnity, title guarantee, encumbrance. Assurance that the seller holds unencumbered ownership of the assets being transferred. Example: A clear-title warranty in a field purchase agreement. Practical use to protect buyer from hidden liens. Challenge: Uncovering hidden encumbrances.

Closing Conditions – Related terms: Precedent conditions, fulfillment, post-closing obligations. Conditions that must be satisfied before a transaction is completed. Example: Obtaining regulatory approval as a closing condition. Practical use to protect parties. Challenge: Delays in meeting conditions can jeopardize the deal.

Co-Production Agreement – Related terms: Joint venture, shared facilities, cost sharing. Arrangement where multiple parties produce from the same reservoir using shared infrastructure. Example: A co-production agreement for a gas-condensate field. Practical application for cost efficiency. Challenge: Allocating production and expenses fairly.

Collateral – Related terms: Security, guarantee, pledge. Asset pledged to secure performance of an obligation. Example: Collateralizing a loan with offshore equipment. Practical use in financing. Challenge: Valuation and enforceability across jurisdictions.

Commissioning – Related terms: Start-up, performance testing, pre-operational phase. Process of testing and verifying that facilities operate according to design. Example: Commissioning of a subsea pipeline. Practical use to ensure safety and functionality. Challenge: Schedule overruns and technical failures.

Compensation Event – Related terms: Breach, liquidated damages, remedial action. Event that triggers payment from one party to another due to contract breach. Example: A compensation event for delayed delivery of equipment. Practical use to allocate risk. Challenge: Quantifying losses and proving causation.

Confidentiality Agreement – Related terms: NDA, non-disclosure, secrecy clause. Contractual obligation to keep certain information secret. Example: An NDA covering geological data shared during negotiations. Practical use to protect proprietary information. Challenge: Enforcing confidentiality across borders.

Construction Risk – Related terms: Cost overrun, schedule delay, turnkey contract. Risk that construction costs exceed estimates or that the project is delayed. Example: Construction risk in an EPC contract for a refinery. Practical application in risk allocation. Challenge: Accurately pricing contingencies.

Contingent Liability – Related terms: Potential obligation, reserve, indemnity. Liability that may arise depending on the occurrence of a future event. Example: A contingent liability for de-commissioning costs. Practical use in financial statements. Challenge: Estimating probability and amount.

Contractual Capacity – Related terms: Legal authority, corporate power, charter. Ability of a party to enter

into binding agreements. Example: Confirming contractual capacity of a state-owned oil company. Practical use to avoid void contracts. Challenge: Verifying corporate governance compliance.

Co-ordination Clause – Related terms: Schedule alignment, inter-party communication, joint planning. Provision requiring parties to coordinate activities to avoid conflicts. Example: A coordination clause mandating weekly operational meetings. Practical application for integrated projects. Challenge: Aligning differing corporate cultures.

Cost-Plus Contract – Related terms: Reimbursement, fee, expense recovery. Contract where the contractor is reimbursed for actual costs plus an agreed fee. Example: A cost-plus contract for drilling services. Practical use when scope is uncertain. Challenge: Cost control and incentive misalignment.

Counter-Offer – Related terms: Negotiation, proposal, acceptance. A response to an offer that modifies its terms, creating a new offer. Example: A counter-offer to increase royalty rates. Practical use in contract negotiations. Challenge: Timing and potential deadlock.

Court-Annexed Arbitration – Related terms: Hybrid dispute resolution, judicial supervision, arbitration award. Arbitration process that is overseen by a court for enforcement. Example: Court-annexed arbitration under the Singapore International Arbitration Act. Practical use for added legal certainty. Challenge: Increased procedural complexity.

Covenant – Related terms: Promise, undertaking, restriction. Formal promise within a contract to do or refrain from doing something. Example: A covenant not to sell assets without consent. Practical use to protect interests. Challenge: Breach consequences and enforceability.

Credit Support – Related terms: Guarantee, collateral, letter of credit. Financial instrument that provides security for contractual obligations. Example: A letter of credit as credit support for a supply contract. Practical use to mitigate counter-party risk. Challenge: Credit rating fluctuations.

Cross-Border Transaction – Related terms: International deal, foreign investment, jurisdiction. Transaction involving parties located in different countries. Example: The acquisition of a Brazilian offshore block by a UK company. Practical application in global markets. Challenge: Currency risk, legal harmonization, tax implications.

Cut-Back Clause – Related terms: Production curtailment, capacity reduction, penalty. Provision allowing a party to reduce output under specified conditions. Example: A cut-back clause triggered by market oversupply. Practical use to manage market exposure. Challenge: Negotiating acceptable thresholds.

De-Risking – Related terms: Hedging, insurance, risk transfer. Strategies to reduce exposure to price, operational, or political risks. Example: De-risking a project through long-term offtake contracts. Practical application for investors. Challenge: Cost of risk mitigation instruments.

Decommissioning Bond – Related terms: Financial guarantee, reclamation fund, closure security. Financial

instrument ensuring funds are available for dismantling and site restoration. Example: A \$200 million decommissioning bond for an offshore platform. Practical use for regulatory compliance. Challenge: Bond sizing and release criteria.

Defect Liability Period – Related terms: Warranty period, maintenance, remedial works. Timeframe after hand-over during which the contractor must rectify defects. Example: A 12-month defect liability period for a processing plant. Practical use to ensure quality. Challenge: Identifying defects and allocating repair costs.

Delimitation – Related terms: Boundary, jurisdiction, territory. Process of defining the geographic scope of a contract's rights. Example: Delimitation of offshore blocks in a basin. Practical application for avoiding overlap. Challenge: Overlapping claims and ambiguous maps.

Deposit Account – Related terms: Escrow, security deposit, trust fund. Account used to hold funds pending fulfillment of contractual conditions. Example: A deposit account holding 10% of contract value until delivery. Practical use for financial security. Challenge: Interest handling and release triggers.

Derivative Contract – Related terms: Futures, swaps, hedging instrument. Financial contract whose value derives from an underlying asset such as oil price. Example: A crude oil swap to lock in price. Practical application for price risk management. Challenge: Counter-party credit risk and valuation complexity.

Dispute Resolution Clause – Related terms: Arbitration, litigation, mediation. Contractual provision specifying the mechanism for handling disagreements. Example: An arbitration clause designating the ICC as the seat. Practical use for certainty. Challenge: Selecting an enforceable and neutral forum.

Distribution Agreement – Related terms: Marketing, sales channel, territory. Contract governing the sale and distribution of oil or gas products. Example: A distribution agreement for refined products in a regional market. Practical use to expand market reach. Challenge: Aligning pricing and inventory management.

Divestiture – Related terms: Asset sale, spin-off, portfolio rationalization. Process of selling or disposing of assets or business units. Example: Divestiture of non-core shale assets. Practical application for strategic focus. Challenge: Valuation and regulatory approval.

Downstream Contract – Related terms: Refinery supply, marketing, retail. Agreement covering activities after extraction, such as refining and distribution. Example: A downstream contract for gasoline supply to a retailer. Practical use for securing market outlets. Challenge: Price volatility and margin pressure.

Earn-Out – Related terms: Contingent payment, performance milestone, post-closing consideration. Payment structure where a seller receives additional compensation based on future performance. Example: An earn-out tied to production volumes over five years. Practical use to bridge valuation gaps. Challenge: Defining measurable targets and audit rights.

Economic Limit – Related terms: Marginal field, cut-off price, unprofitable operation. Point at which continued production is no longer economically viable. Example: Ceasing production when oil price falls

below \$30 per barrel. Practical use for operational decision-making. Challenge: Forecasting price trends and cost escalations.

Effective Date – Related terms: Commencement, start-up, contract initiation. Date on which the contract becomes legally binding. Example: The effective date set as the day of signature. Practical use for timing obligations. Challenge: Aligning with regulatory approvals.

Escalation Clause – Related terms: Price adjustment, CPI, cost index. Provision allowing contract prices to increase in line with agreed indices. Example: An escalation clause tied to the US Consumer Price Index. Practical use to preserve profitability. Challenge: Selecting appropriate index and frequency.

Exclusive Zone – Related terms: Area of rights, monopoly, territory. Geographic area where a party has exclusive rights to explore or produce. Example: An exclusive zone granted for offshore drilling. Practical application in securing investment. Challenge: Limited flexibility for other operators.

Exhibit – Related terms: Annex, schedule, appendix. Document attached to a contract that provides additional detail. Example: Exhibit A containing technical specifications. Practical use for clarity. Challenge: Ensuring consistency between main contract and exhibits.

Exploration Licence – Related terms: Permit, concession, drilling authorization. Government-issued right to explore for hydrocarbons in a defined area. Example: A 5-year exploration licence for an onshore basin. Practical use to secure exploration rights. Challenge: Meeting work-program obligations.

Export Credit Agency (ECA) – Related terms: Financing, guarantee, political risk insurer. Governmental institution that provides financial support for exports. Example: ECA financing for a LNG plant construction. Practical application for project funding. Challenge: Compliance with ECA guidelines and repayment terms.

Extended Warranty – Related terms: Service contract, maintenance agreement, after-sales support. Additional guarantee beyond the standard warranty period. Example: A two-year extended warranty on a subsea valve. Practical use for risk mitigation. Challenge: Cost-benefit analysis of extended coverage.

Facilitation Fee – Related terms: Commission, brokerage, success fee. Payment made to a party for assisting in the execution of a transaction. Example: A facilitation fee paid to a local agent for securing land rights. Practical use to incentivize cooperation. Challenge: Transparency and tax treatment.

Failure to Perform – Related terms: Breach, default, non-performance. Situation where a party does not fulfill contractual obligations. Example: Failure to deliver equipment on schedule. Practical use in triggering remedies.

Force Majeure – Related terms: Act of God, unforeseen event, impossibility. Clause excusing performance when extraordinary events beyond control occur. Example: A hurricane preventing offshore drilling. Challenge: Defining scope and notice requirements.

Front-End Engineering Design (FEED) – Related terms: Preliminary design, EPC, project definition. Detailed engineering study that defines project specifications before final investment decision. Example: FEED for a gas processing plant. Practical application for cost estimation. Challenge: Scope creep and design changes.

Fuel-Gas Agreement – Related terms: Supply contract, off-take, cogeneration. Contract for the provision of fuel gas to power generation or process facilities. Example: A fuel-gas agreement for a petrochemical complex. Practical use to secure reliable feedstock. Challenge: Price volatility and allocation of gas.

Funding Gap – Related terms: Capital shortfall, financing, cash-flow deficit. Difference between project costs and available financing. Example: A \$500 million funding gap for a deepwater development. Practical use for identifying financing needs. Challenge: Securing additional equity or debt.

General Indemnity – Related terms: Hold-harmless, liability, insurance. Broad contractual promise to compensate the other party for losses arising from specified risks. Example: A general indemnity covering third-party claims. Practical use for risk transfer. Challenge: Caps and exclusions.

Geological Survey – Related terms: Seismic study, exploration data, subsurface analysis. Systematic investigation of the earth's structure to locate hydrocarbons. Example: 3-D seismic survey over a frontier basin. Practical application for reserve estimation. Challenge: Data interpretation and cost.

Good Faith – Related terms: Fair dealing, honesty, commercial reasonableness. Obligation to act honestly and fairly in contractual performance. Example: Parties must negotiate in good faith on price adjustments. Practical use to promote cooperation. Challenge: Proving breach of good faith.

Guarantee – Related terms: Surety, performance bond, letter of guarantee. Commitment by a third party to fulfill an obligation if the primary obligor defaults. Example: A parent company guarantee for a subsidiary's contract. Practical use for credit enhancement. Challenge: Enforceability across jurisdictions.

Groundwater Protection Clause – Related terms: Environmental safeguard, water management, contamination. Provision requiring measures to protect groundwater from pollution. Example: A clause mandating monitoring of produced water. Practical use to meet regulatory standards. Challenge: Monitoring costs and liability for spills.

Hedging Strategy – Related terms: Risk management, futures, options. Plan to offset price risk through financial instruments. Example: Hedging crude exposure with forward contracts. Practical application to stabilize cash flow. Challenge: Basis risk and liquidity.

Higher-Order Clause – Related terms: Umbrella provision, master clause, overarching term. Broad clause that governs a group of related provisions. Example: A higher-order confidentiality clause covering all annexes. Challenge: Ensuring interpretative clarity.

Holding Company – Related terms: Parent company, subsidiary, corporate structure. Entity that owns controlling interest in other companies but may not engage in operations. Example: A holding company

owning multiple exploration subsidiaries. Practical use for tax planning. Challenge: Transparency and regulatory scrutiny.

Hybrid Contract – Related terms: Mixed-type, blended, dual-model. Contract that combines features of different contract types, such as service and production sharing. Example: A hybrid contract with elements of cost-plus and profit-share. Practical application for tailored risk allocation. Challenge: Complexity in accounting and governance.

Imbalance Clause – Related terms: Production sharing, revenue split, corrective mechanism. Provision that adjusts profit shares when actual production deviates from forecasts. Example: An imbalance clause that reallocates revenue if output falls below 80% of estimate. Practical use to maintain fairness. Challenge: Measurement and dispute over triggers.

Indemnity Cap – Related terms: Liability limit, maximum exposure, aggregate limit. Upper limit on the amount of indemnification payable under a contract. Example: An indemnity cap of \$50 million for environmental damages. Practical use to control risk exposure. Challenge: Negotiating acceptable caps.

In-Kind Delivery – Related terms: Physical delivery, commodity supply, barter. Supplying the actual product rather than cash equivalent. Example: In-kind delivery of natural gas to a power plant. Practical use for meeting contractual obligations. Challenge: Logistics and quality control.

Incentive Clause – Related terms: Performance bonus, milestone payment, reward provision. Provision that grants additional compensation for exceeding performance targets. Example: An incentive clause rewarding production above 120% of plan. Practical use to encourage over-performance. Challenge: Setting realistic targets.

Insolvency – Related terms: Bankruptcy, liquidation, restructuring. Legal state where a party cannot meet its debt obligations. Example: Insolvency of a contractor leading to contract termination. Practical use for risk assessment. Challenge: Cross-border insolvency coordination.

Joint Development Agreement (JDA) – Related terms: Co-venture, shared infrastructure, unitisation. Contract whereby parties jointly develop a reservoir that straddles boundaries. Example: A JDA for a trans-border gas field. Practical use for resource optimization. Challenge: Allocating costs and revenues.

Joint Operating Agreement (JOA) – Related terms: Operator, non-operator, management contract. Agreement that defines the rights and duties of parties in a joint venture, designating an operator. Example: A JOA appointing Company A as operator. Practical use for governance. Challenge: Dispute resolution among participants.

Key Person Clause – Related terms: Personnel risk, expertise, continuity. Provision requiring the presence of specific individuals critical to project success. Example: A key person clause obligating the senior geologist to remain for the duration of the drilling program. Practical use to protect expertise. Challenge: Succession

planning.

Land Use Permit – Related terms: Zoning, environmental clearance, right-of-way. Authorization to use land for specific purposes, such as pipeline construction. Example: A land use permit for a coastal pipeline corridor. Practical application for project implementation. Challenge: Community opposition and legal challenges.

Letter of Credit (LC) – Related terms: Bank guarantee, payment security, documentary credit. Financial instrument issued by a bank guaranteeing payment upon presentation of documents. Example: An irrevocable LC for the purchase of drilling equipment. Practical use for trade finance. Challenge: Compliance with LC terms.

Liquidated Damages – Related terms: Penalty, pre-determined sum, breach remedy. Fixed amount agreed in advance to compensate for breach of contract. Example: Liquidated damages for delayed commissioning of a plant. Practical use to provide certainty. Challenge: Enforceability if deemed punitive.

Lock-In Period – Related terms: Exclusivity, non-competition, commitment term. Timeframe during which a party cannot terminate or switch counterparties. Example: A 3-year lock-in for a gas offtake contract. Practical use to secure revenue streams. Challenge: Flexibility for market changes.

Long-Term Contract (LTC) – Related terms: Offtake, supply agreement, fixed price. Contract extending over several years to purchase or sell hydrocarbons. Example: A 20-year LNG supply contract. Practical use for investment certainty. Challenge: Price renegotiation and market volatility.

Margin Call – Related terms: Collateral, credit line, exposure. Request by a counter-party for additional security when exposures exceed agreed limits. Example: A margin call on a crude oil swap. Practical use to manage credit risk. Challenge: Liquidity strain on the called party.

Material Adverse Change (MAC) – Related terms: Event of default, trigger event, covenant breach. Clause allowing termination if a significant negative change occurs. Example: A MAC clause triggered by new sanctions on a country. Practical use for protection. Challenge: Defining “material” and proving causation.

Mechanical Integrity Program (MIP) – Related terms: Safety, inspection, reliability. Systematic program to ensure equipment remains safe and functional. Example: A MIP for offshore wellheads. Practical use to prevent accidents. Challenge: Cost of inspections and compliance tracking.

Milestone Payment – Related terms: Progress payment, deliverable, schedule. Payment tied to the achievement of predefined project milestones. Example: A milestone payment upon completion of the foundation. Practical use for cash-flow management. Challenge: Agreeing on objective criteria.

Minimum Work Programme (MWP) – Related terms: Exploration commitment, drilling schedule, performance obligation. Minimum number of activities a licensee must undertake within a period. Example: An MWP requiring two wells in three years. Practical use for maintaining licence validity. Challenge:

Financing and technical feasibility.

Mitigation Plan – Related terms: Remedial action, environmental management, corrective measure. Strategy to reduce adverse impacts identified in assessments. Example: A mitigation plan for marine wildlife disturbance. Challenge: Effectiveness monitoring.

Mixed-Mode Contract – Related terms: Hybrid, service-plus-production, dual compensation. Contract combining elements of service provision and production sharing. Example: A mixed-mode contract where the contractor receives a fee plus a share of profits. Practical use for aligning incentives. Challenge: Accounting complexity.

Modular Construction – Related terms: Prefabrication, offshore platform, turnkey. Building components off-site for later assembly. Example: Modular construction of a floating production unit. Practical use to reduce offshore construction time. Challenge: Transport logistics and integration.

Monetary Adjustment Clause – Related terms: Inflation, currency fluctuation, price index. Provision allowing contract price to be adjusted for monetary changes. Example: A monetary adjustment clause linked to the Eurozone inflation rate. Practical use to preserve real value. Challenge: Selecting appropriate index.

Multi-Party Agreement (MPA) – Related terms: Consortium, joint venture, collaborative contract. Agreement involving three or more parties sharing rights and obligations. Example: An MPA for a basin-wide development project. Practical use for resource pooling. Challenge: Coordination and decision-making.

Negotiated Settlement – Related terms: Mediation, compromise, dispute resolution. Voluntary resolution of a dispute without formal adjudication. Example: Parties reaching a negotiated settlement on a royalty dispute. Practical use to avoid costly arbitration. Challenge: Ensuring enforceability.

Non-Compete Clause – Related terms: Restraint of trade, exclusivity, confidentiality. Provision restricting a party from engaging in competing activities. Example: A non-compete clause preventing a former operator from working in the same basin for two years. Practical use for protecting investments. Challenge: Enforceability under local law.

Non-Disclosure Agreement (NDA) – Related terms: Confidentiality, secrecy, proprietary information. Contract obligating parties to keep disclosed information confidential. Example: An NDA signed before sharing seismic data. Practical use to protect trade secrets. Challenge: Cross-border enforcement.

Operating Agreement – Related terms: JOA, governance, management. Document that sets out the rights and duties of parties in a joint operation. Example: An operating agreement for a shared offshore platform. Practical use for day-to-day management. Challenge: Aligning operational procedures.

Operating Licence – Related terms: Permit, authorization, regulatory approval. Licence granting the right to produce hydrocarbons. Example: An operating licence for a gas field. Practical use to legally extract resources. Challenge: Compliance with production quotas.

Operator – Related terms: Managing party, lead company, JOA. Entity responsible for day-to-day management of a joint venture. Example: Company X appointed as operator of a consortium. Practical use for centralized decision-making. Challenge: Liability exposure and performance expectations.

Option Agreement – Related terms: Right of first refusal, pre-emptive right, exploration option. Contract giving a party the right, but not the obligation, to acquire interests later. Example: An option to purchase additional acreage after successful drilling. Practical use for strategic expansion. Challenge: Timing and pricing of exercise.

Performance Bond – Related terms: Guarantee, surety, security. Financial instrument ensuring contractor performance to a specified standard. Example: A performance bond equal to 10% of contract value for a pipeline project. Challenge: Claim process and bond release.

Petroleum Revenue Tax (PRT) – Related terms: Fiscal regime, royalty, tax liability. Tax levied on profits from petroleum extraction. Example: A PRT of 30% on net profits in a jurisdiction. Practical use for government revenue. Challenge: Tax planning and double taxation.

Phased Development – Related terms: Staged investment, incremental expansion, modular approach. Strategy of developing a project in sequential phases. Example: Phased development of a deepwater field, starting with a single platform. Challenge: Coordinating phases and maintaining flexibility.

Pipeline Access Agreement – Related terms: Transportation, tariff, right-of-use. Contract granting right to transport hydrocarbons through a pipeline. Example: A pipeline access agreement for delivering gas to a processing plant. Practical use for logistics. Challenge: Capacity allocation and tariff negotiations.

Planned Maintenance – Related terms: Preventive maintenance, outage, reliability. Scheduled activities to maintain equipment performance. Example: Planned maintenance shutdown of a refinery unit. Practical use to avoid unplanned failures. Challenge: Production loss during maintenance windows.

Power-Purchase Agreement (PPA) – Related terms: Offtake, renewable energy, contract for difference. Long-term contract to sell electricity generated from gas-fired power plants. Example: A 15-year PPA for a combined-cycle plant. Practical use for revenue certainty. Challenge: Price adjustments and regulatory changes.

Pre-emptive Right – Related terms: Right of first refusal, option, seniority clause. Right granted to existing shareholders to acquire additional shares before third parties. Example: A pre-emptive right allowing a partner to increase its stake in a field. Practical use to maintain ownership proportion. Challenge: Valuation and timing.

Pre-Qualification (PQ) – Related terms: Tender screening, capability assessment, vendor selection. Process to assess a contractor's ability to perform before invitation to tender. Example: Pre-qualification of drilling rigs for an offshore contract. Practical use to shortlist capable suppliers. Challenge: Objective criteria and

transparency.

Pre-Negotiated Rate – Related terms: Fixed price, contract rate, agreed tariff. Rate established before contract execution, often used for services. Example: A pre-negotiated rate for cementing services. Practical use for budgeting. Challenge: Adjusting for inflation or market changes.

Principal-Agent Relationship – Related terms: Delegation, authority, fiduciary duty. Relationship where the principal authorizes the agent to act on its behalf. Example: An oil company acting as principal for a local service agent. Practical use for local representation. Challenge: Liability for agent's actions.

Production Sharing Agreement (PSA) – Related terms: Fiscal regime, cost recovery, profit split. Contract where the state and the contractor share production after cost recovery. Example: A PSA granting 60% of net profit to the contractor. Practical use for resource development in many jurisdictions. Challenge: Negotiating cost recovery caps and profit splits.

Production Target – Related terms: Output quota, performance metric, capacity. Specified amount of hydrocarbons to be produced within a period. Example: A production target of 100k barrels per day. Practical use for planning and monitoring. Challenge: Geological uncertainty and operational constraints.

Progress Payment – Related terms: Milestone payment, interim payment, cash-flow. Payment made as work progresses, often tied to verified completion of stages. Example: A progress payment after foundation installation. Practical use to fund ongoing work. Challenge: Verification and dispute over quality.

Promissory Note – Related terms: Debt instrument, loan agreement, maturity. Written promise to pay a specified amount at a future date. Example: A promissory note issued to finance drilling equipment. Practical use for short-term financing. Challenge: Credit risk and enforceability.

Proprietary Data – Related terms: Confidential information, trade secret, exclusive rights. Data owned by a party and protected from disclosure. Example: Proprietary seismic interpretation maps. Practical use to maintain competitive advantage. Challenge: Safeguarding against leaks.

Qualified Person (QP) – Related terms: Technical expert, certification, competency. Individual authorized to certify the accuracy of technical data.
