Warranties provide assurance to customers that they will be compensated if the product or service fails to meet specified standards or expectations. Key terms and concepts related to warranty management include:

1. **Warranty Period**: The duration for which a warranty is valid, typically specified in months or years. Understanding the warranty period is essential for both customers and service providers to ensure timely repairs or replacements.

4. **Limited Warranty**: A warranty that covers specific components or conditions, as opposed to a comprehensive warranty that covers all aspects of the product. Understanding the limitations of a warranty is essential for managing customer expectations.
5. **Claim Process**: The procedure for customers to request compensation or repairs under the terms of the warranty. A smooth and efficient claim process is essential for ensuring customer satisfaction and retention.
